

PortfolioS.

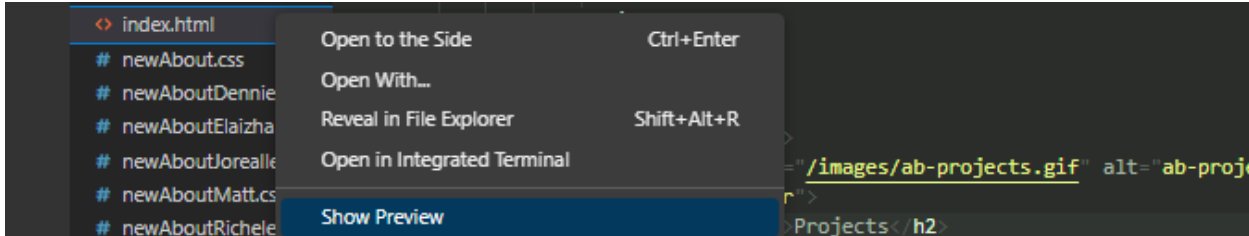

A Website Portfolio Project in ICT 102: Introduction to Computing

IMPORTANT NOTE:

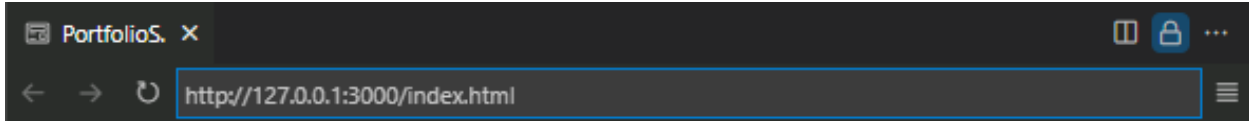

We are having a bit of trouble during the running of the website, specifically, the problem is the images on the website would not load. We actually used the VSCode Extension called “**Live Server**” to view our output and it has been going smoothly.

If it is not also running on your end, please consider downloading the extension and copy the link in the given preview, and paste it on the browser of your choice, below are the images on how we do it.

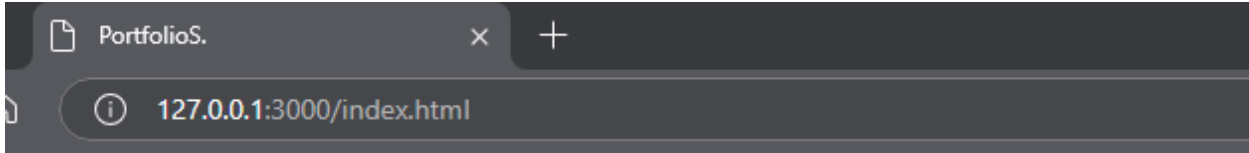

Step1 : Right click the main html file (index.html) and click **show preview**.

Step 2: **Copy the link** of the preview/sidebar that will appear.

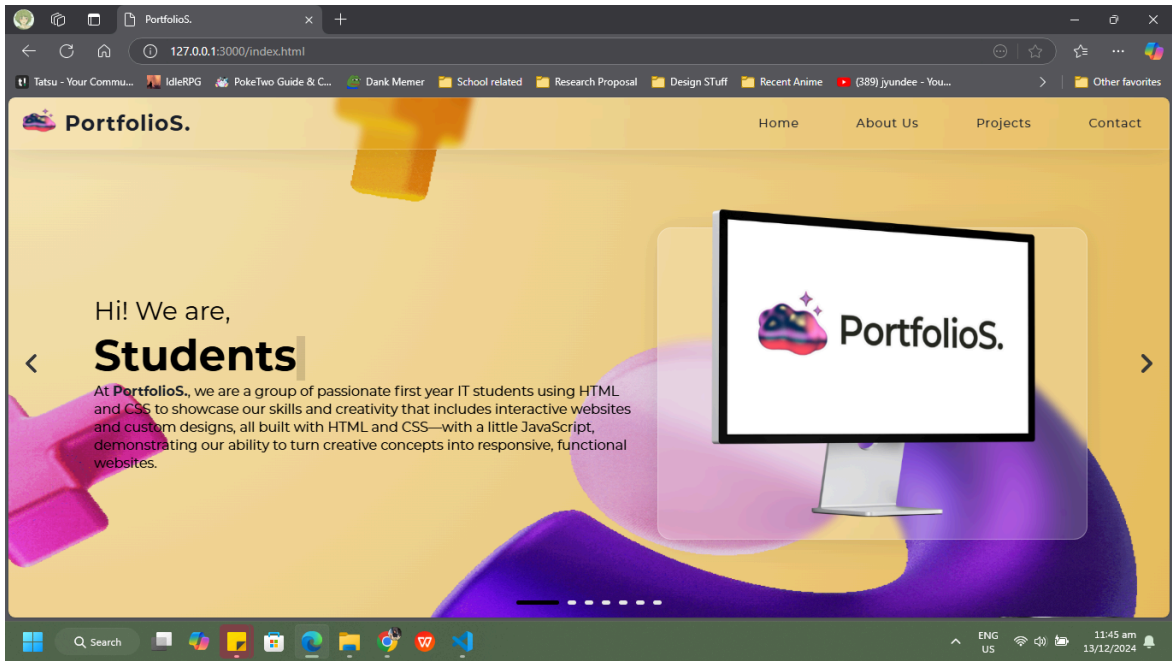

Step 3: Open the browser of your choice (in my case Edge) and **paste the copied link**.

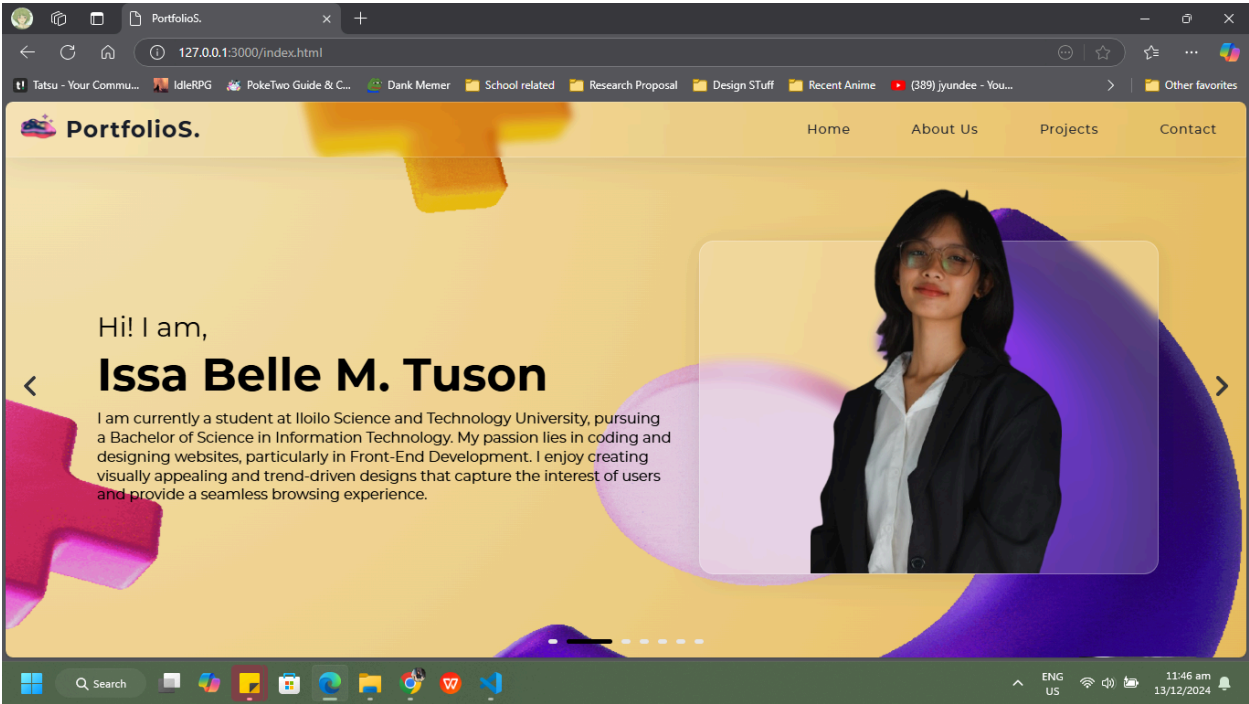

SCREENSHOTS OF OUR FINISHED WEBSITE:

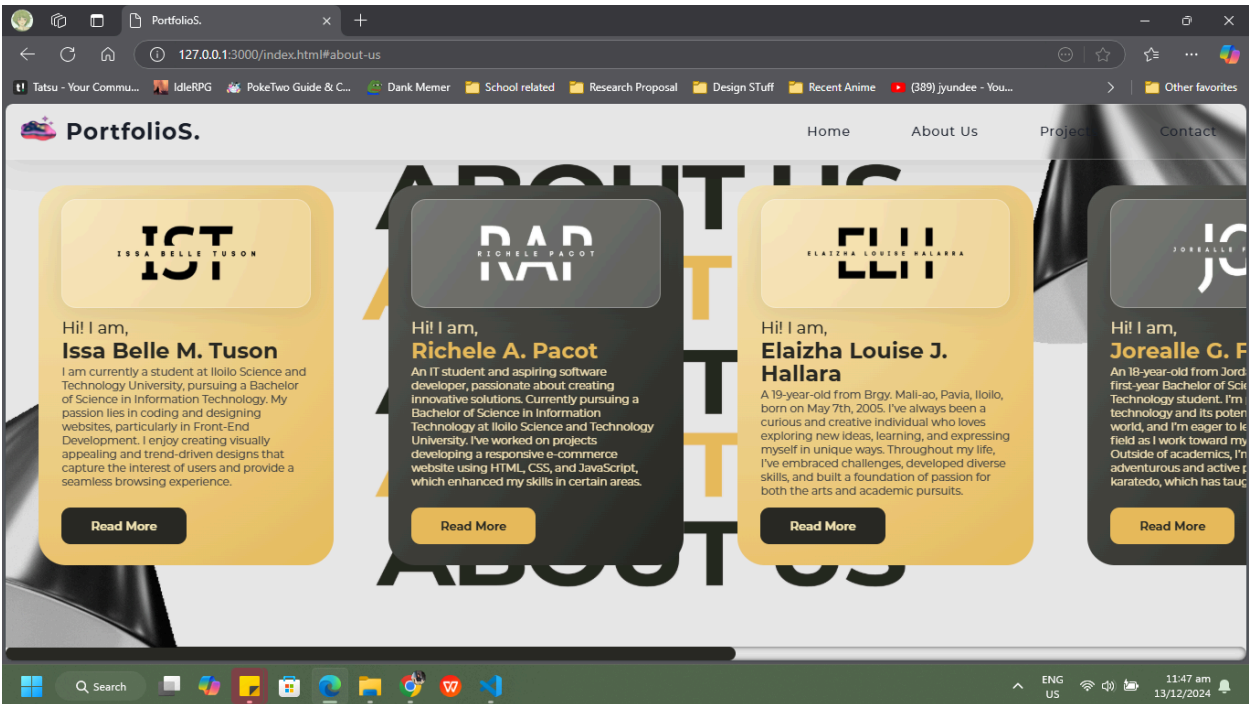

To make sure that our output will be seen as what we did, we will provide a screenshot. As we are concerned that out grade in this project will be affected if it would not show the best output possible in your end of the screen.

CONTACTS

ENDING NOTE:

Please inform us if you are having a hard time accessing our website through your end, we are willing to show you our output in person using the main laptop we used for this project. If you have any concerns please message us directly. Thank you and have fun exploring our website.
